

Proposed OU1 Vadose Zone Sampling

-  Southern Area - proposed sampling at 0-2, 2-15, and >15 ft bgs if required
-  Undeveloped Area - proposed sampling at 0-2 ft bgs and deeper if required
-  Dryden Rd Businesses - proposed sampling at 2-15 and >15 ft bgs if required
-  Valley Asphalt - limited sampling only (subject to feasibility)

Note:

1. Surface sampling (0 to 2 ft bgs) for direct contact risk assessment will not be conducted in areas where pavement/roadway cover predominates.
2. Subsurface (2 to 15 ft bgs) data will be used for direct contact – construction worker scenario
3. Sample results from vadose zone will be used for potential leaching to groundwater
